

GTI TREE STAKE

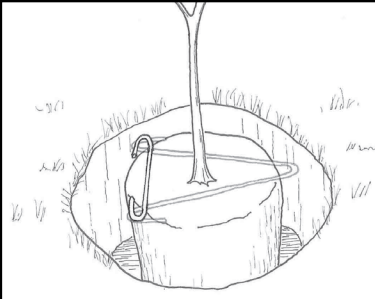

INSTALLATION INSTRUCTIONS

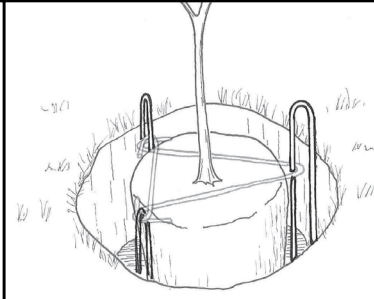

STEP 1
Dig planting hole 2x as large as tree root ball. Place tree in hole so that top of root ball sits 1 to 3 inches above ground level.

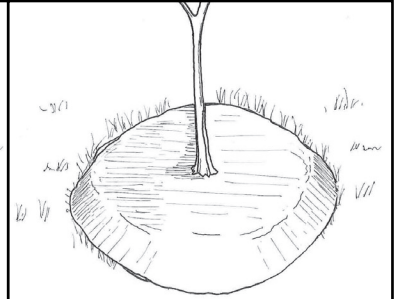

STEP 2
Place saddle on root ball so trunk of tree is centered. Make sure ends of saddle extend beyond root ball.

STEP 3
Place stabilizer on open end of saddle. Aligning hooks on stabilizer and saddle.

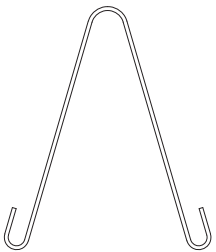

STEP 4
Insert one end of stake between saddle and root ball. Pinch open ends of stake together and hammer in each stake until it sits slightly below root ball.

STEP 5
Backfill hole gently compacting dirt around root ball covering stake. Do not place soil against the base of the trunk. Thoroughly soak tree with slow stream of water.

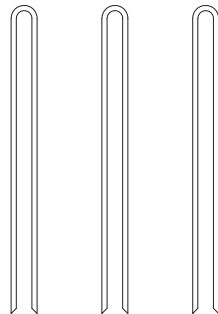

PARTS

1 X SADDLE

1 X STABILIZER

3 X STAKES

SIZES

SMALL - 10-20 GAL
